## Articulation milestones

Age	Sound
1-6 months	crying, cooing, laughter, squealing, growling, babbling begins from 4-6 months (i.e. buh, duh)
6-8 months	reduplicated babbles (i.e. buh-buh)
8-10 months	variegated babbling (i.e. buh-duh, muh-buh)
10-12 months	jargon (made up words but starts to sound conversational)
2 years	Most children say p, b, m, h, t, d, n correctly.  People who don't see your child every day are able to understand 50% of what the child says.
3 years	y, k, g, f 50-75% of conversation is understood by unfamiliar listeners Parents understand 75-100%
4 years	l, ch, sh, j, s, z, v  Speech is understood by everyone 100% of the time
5 years	r, th (like in "the")
6 years	th (like in "think") Speech sounds like an adult with no errors

If you have any questions about your child's speech development, please call us at 515-207-2526. We offer free 15 minute consultations over the phone!
